

WEEKLY REPORT

Work done in last week:

- Started the internship at Techmica IT Solutions and got introduced to the project.
- Understood the problem — building an AI chatbot that can handle customer support for a cloud software company using multiple AI agents.
- Decided on the tech stack — LangGraph for controlling agent flow, FastAPI for the backend, Groq LLaMA as the AI model, and Qdrant as the vector database.
- Studied the LangGraph and FastAPI documentation to understand how to build multi-agent systems.
- Planned the full project structure — which folders, files, and modules would be needed.

Plans for next week:

- Set up the GitHub repository and create the basic project folder structure.
- Write the data models and configuration files needed for the project.
- Start adding knowledge base articles and building the search pipeline.
