

WEEKLY REPORT

Work done in last week:

- Built the BaseAgent class and the Triage Agent that reads the customer message, detects the language, and decides if the problem is technical or billing.
- Built the Technical Agent that answers questions about dashboard errors and server issues using the knowledge base.
- Built the Billing Agent that handles payment and invoice questions, and the Escalation Agent that hands off to a human when needed.
- Wired all agents together using the LangGraph orchestrator — each agent is a node in a graph and the system automatically routes to the right agent.
- Built the FastAPI backend with routes for chat, conversation history, handover logs, and health check. Added a simple browser-based chat UI for testing.
- Wrote test files for triage, search, and handover. Added the README and architecture documentation to complete the project.
