

WEEKLY REPORT

Work done in last week:

- Wrote the data models that define how messages and agent states are stored during a conversation.
- Created configuration files for agent settings and project settings using YAML.
- Added helper files for logging, tracing, and connecting to the Groq API.
- Added the first 10 knowledge base articles (KB-001 to KB-010) covering topics like dashboard errors and API issues.
- Added the remaining 10 knowledge base articles (KB-011 to KB-020) and wrote the ingest script that processes all articles and saves them in the Qdrant database.

Plans for next week:

- Build the text embedder using NVIDIA NIM to convert customer questions into searchable vectors.
- Set up the Qdrant vector store and build the hybrid search system.
- Start building the input and output guardrails to check messages before and after processing.
